## GLASS TERMINAL FOR HIGH-SPEED OPTICAL COMMUNICATION

5

## ABSTRACT OF THE DISCLOSURE

A glass terminal for high-speed optical communication. The terminal comprises: an eyelet member provided with an inserting hole; an optical element 10 mounting block fixed to the eyelet member, the optical element mounting block having such a size to cover a range where the inserting hole is arranged, the optical element mounting block being provided with a coaxial hole 15 arranged coaxially with the inserting hole and having a diameter larger than that of the signal lead; a signal lead being inserted into the inserting hole and sealed with the eyelet member by means of glass filled in the inserting hole, the signal lead being extending into the coaxial hole; the optical element mounting block having a 20 side surface partially cut off so that an outer peripheral surface of the signal lead in the coaxial hole is partially exposed.
